

Dr. Burjor P. Banaji

M.S.; M.R.C. Ophth. (U.K.); D.O. (London)
D.O. (Glasgow); D.O. (Dublin) D.O.M.S.

Dr. Burjor Banaji is the third generation in a line of distinguished Ophthalmic surgeons that began nearly a hundred years ago with his grand father Dr. Burjor P. Banaji (Senior).

His father Dr. Phiroze Banaji, was one of India's leading Ophthalmic surgeons and teachers, credited with introducing modern Retinal Detachment surgery and Corneal Transplantation to the country.

After completing his post graduate studies in the United Kingdom in 1988, Dr. Burjor Banaji returned to Bombay to take over the family practice. In keeping with the family tradition of being at the cutting edge of Ophthalmology throughout the last century, Dr. Banaji introduced several "firsts" to India. Notable amongst them being the first clinic to use the Diode Laser in the treatment of Retinal disorders; amongst the first to start Phacoemulsification (no stitch cataract surgery) and now the pioneering surgeon for the revolutionary LASIK procedure, to help reduce dependence on artificial eyewear.

In 1995, Dr. Banaji and a handful of surgeons in the world were perfecting a revolutionary new procedure called LASIK. Recognizing the enormous potential to help those afflicted with glasses and contact lenses. Dr. Banaji became the pioneering surgeon in India to persevere in master dema technique.

DR. BURJOR P. BANAJI

Dr. Banaji has performed thousands of LASIKs and is considered to be one of the leading authorities on the procedure.

Recognizing his pioneering work in the subject, Dr. Banaji has been an invited teacher to such prestigious institutions of learning as the Harvard Medical School in Boston, the Moorfields Eye Hospital in London, and the Eye Foundation Hospital

in Alabama USA. He has been the chief instructor on courses teaching the LASIK procedure at several meetings of the American Society of Cataract and Refractive Surgeons held in Boston, San Diego, Chicago, San Francisco and Seattle. Dr. Banaji has also invented several surgical instruments for LASIK and CATARACT surgery which are now used by surgeons the world over.
